Installing Xcelsius LiveCycle Data Services Gateway

The Xcelsius LiveCycle Data Services (XLCDS) Gateway must be installed and running on an Adobe® LiveCycle® Data Services (LCDS) Server in order to take advantage of the LCDS Connection within Xcelsius.

To install the Xcelsius LiveCycle Data Services Gateway:

1. Ensure that an Adobe LiveCycle Data Services Server is installed and configured.

For more information, please refer to the LiveCycle Data Services Readme on the installation disc, e.g. D:\AddOns\LiveCycle Data Services\Adobe\

2. Locate the XLCDS files on the Xcelsius Installation Disc, e.g. D:\AddOns\LiveCycle Data Services\Adobe\.
3. Copy the Xcelsius Servlet to the appropriate class folder of the LCDS Server.

```
classes/xcelsius/servlet/XLCDSServlet.class →  
{LCDS}/WEB-INF/classes/xcelsius/servlet/XLCDSServlet.class
```

4. Copy the XLCDS Destination List to the LCDS Server.

```
Xcelsius-config.xml → ${LCDS}/WEB-INF/Xcelsius-config.xml
```

5. Copy the XLCDS Destination List Schema to the LCDS Server.

```
Xcelsius-config.xsd → ${LCDS}/WEB-INF/Xcelsius-config.xsd
```

6. Add a servlet entry and a servlet mapping entry for the new Xcelsius Servlet into the existing LCDS Web Application deployment descriptor file, e.g. \${LCDS}/WEB-INF/web.xml.

```
<servlet>  
  <servlet-name>XcelsiusServlet</servlet-name>  
  <servlet-class>xcelsius.servlet.XL  
  CDServlet</servlet-class>
```

```

    <init-param>
      <param-name>configuration.file</param-name>
      <param-value>/WEB-INF/Xcelsius-config.xml</param-
value>
    </init-param>
  </servlet>

<servlet-mapping>
  <servlet-name>XcelsiusServlet</servlet-name>
  <url-pattern>/xcelsius/*</url-pattern>
</servlet-mapping>

```

A sample Web Application deployment descriptor file (web.xml) is included with the Installation Disc as a reference.

To configure the Xcelsius LiveCycle Data Services Gateway

1. Create data destinations on your LCDS Server.

For more information, please refer to the LiveCycle Data Services Readme on the installation disc, e.g. D:\AddOns\LiveCycle Data Services\Adobe\

2. Open the Xcelsius Destination List on the LCDS Server, e.g. `#{LCDS}/WEB-INF/Xcelsius-config.xml`

3. Create a new "destination" node for each LCDS destination that you want to expose to the LCDSConnection within Xcelsius .

- Each destination should have an "id" node corresponding to a valid LCDS destination defined in the LCDS Message Service configuration file (messaging-config.xml).
- Each destination should also describe the available data fields for the destination, including the type of the field as well as how that field should be mapped when bound to an Xcelsius range.
- The XLCDS Destination List Schema (Xcelsius-config.xsd) defines the exact structure of the XML required.
- A sample destination node is shown below as a reference:

```

<destination>
  <id>stockFeed</id>
  <description>Real-time stock feed.</description>
  <metadata>
    <field datatype="String" shape="Single

```

```
ton">stock-symbol</field>
  <field datatype="String" shape="Single
ton">stock-price</field>
</metadata>
</destination>
```

4. Ensure that destinations are started before connecting to them through the Xcelsius LCDS Connection.
